

5 TRUTHS

YOU DIDN'T KNOW ABOUT THE CLIMATE

In a three-quarter talk, Professor Emeritus Johannes Krüger debunks three decades of climate hysteria. A wide range of "truths" about the climate are in fact unscientific myths. Here's a taste. It is recommended to watch the whole lecture, which is in Danish (See QR, link to flyer, lecture and article, - where you can choose language)

1
Numerous UN climate panel annual reports are demonstrably manipulated to make the climate look worse than it is, including **manipulation of measured temperatures** (see drawing).

2
CO2 is politically designated as the big culprit although **water vapour/clouds** is in fact the main "climate gas"

3
A former UN climate panel member has admitted: "To capture the public's attention, **we need to create scare scenarios, make dramatic statements** and put less emphasis on the doubts we may have"

4
Articles have been demonstrably manipulated to make it appear that **97%** of scientists believe that CO2, and therefore humans, are the main cause of global warming
The real figure is ~1%

5
We are indoctrinated by the **media** to believe that the weather is extreme. But neither floods, tropical cyclones, tornadoes, storms nor droughts are occurring more frequently
